CME access for The American Journal of Pathology and the Journal of Molecular Diagnostics
IMPORTANT NOTICE

The ASIP Journal CME exams can only be accessed with a paid subscription to the Journal CME Program and after you are registered on the journal website.

Participants may subscribe online http://www.asip.org/CME/journalCME.htm

Please allow for five (5) business days for the ASIP CME Office to process your subscription fee and to send you information about how to REGISTER as a CME user on the journal website (http://jmd.amjpathol.org/).

Please allow for five (5) business days before attempting to access CME exams after you are registered on the journal website (http://jmd.amjpathol.org/). Please bear this in mind when planning for CME requirement deadlines.
CME Subscribers: after you have logged into the journal home page website, choose CME from the menu bar, and then choose ASIP Journal CME Programs

http://www.journals.elsevierhealth.com/periodicals/jmdi
http://www.journals.elsevierhealth.com/periodicals/ajpa
NOTE
The CME exams and results are administered through Rievent, an online medical education technology company, and first time users to the Rievent testing platform will need to register ONE TIME to provide their name, degree, etc for the certificate that will be generated upon completion of exam. You need to register on Rievent *only once* and can update your profile at any time.
The image below shows part of the Rievent registration page which will need to be completed for first-time visitors to the Rievent CME platform. Enter accurate information as this will populate certificates. When finished filling out the form, click SAVE.
Customers will be asked if they would like to import their records from OTHER ELSEVIER CME PROGRAMS. This is not referring to earlier ASIP CME programs, but to any other Elsevier journals where the customer may already have records on the Elsevier system. We recommend you click YES and enter your same login information to import. If the system does not find it, it will allow you to try again or simply continue.

Import My Continuing Education History and Subscriptions - One Time Opportunity

If you had a previous account — or multiple accounts — on our old system and have completed online continuing education activities with us before, you must import your old activities now to retain access to your subscriptions and exam history. This would include any previously earned credits and any continuing education entitlements (e.g., you purchased a journal subscription so you could take an exam and complete the continuing education).

☐ YES, I want to import my continuing education history and related subscriptions from my old account(s) to my new account at this time. You will need your username(s) and password(s) from any and all accounts within the old system.

RECOMMENDATION: If you are unsure, choose this option to integrate any potential account info and ensure your continued access to continuing education program content. You will not be given this option again.

☐ NO, I am a new user or I have no continuing education history or related subscriptions to import.

Continue
If the records are not found, you can ask the system to save the username for future, or agree that no results are on file, or try again. Click Continue to proceed to the test.
The “CME Home page” will include basic information, and a list of exams. Click on any exam title to begin the test.
The next page is the introductory page for that month’s exam. Select CONTINUE to proceed to test questions.

You will also see your name here, and the option to Edit Your Profile.
First question of exam...

1. Targeted cancer therapies aim to decrease the toxic burden of systemically administered treatments. Based on the referenced review, select the ONE statement that is NOT TRUE: [See Am J Pathol 2010; 178(12-13). DOI: 10.1016/j.amjpatho.2010.09.004; the authors of the referenced article did not disclose any relevant financial relationships.]
   a. To be effective, systemically delivered pharmacological compounds must reach high concentrations in the tumor and are therefore frequently toxic to the normal tissue or have limited success in curing the disease.
   b. One strategy of targeted therapy is selective delivery of highly toxic compounds coupled to high affinity ligands directed toward systemically accessible cancer proteins.
   c. Cancer-specific antigens must be expressed in a hypoxic environment to be effectively targeted.
   d. Proteins with high potential as therapeutic targets are often expressed on the outer side of the plasma membrane or are deposited in the extracellular matrix (ECM).
...last question of exam. Then choose SUBMIT when finished answering all questions.
If you **do not pass** the test within the designated number of attempts, you will see this screen...

```
Test Results
Sorry, but you did not pass the test
Your score was lower than required.
The required passing score is 75%. Your score was 67%.
You did not pass the test in the allowed number of tries (2)

Thank you for your participation. This concludes your on-line program.

Additional Details
For your better understanding, we have presented the test with the correct answers highlighted. Following the correct answer is a brief explanation of the rationale behind each correct response. You did not achieve a passing score in the allowed number of attempts. As a result, you will not be able to continue the program.

CME Test
Your Score: 67%  Required Score: 75%

1. Targeted cancer therapies aim to decrease the toxic burden of systemically administered treatments. Based on the referenced Review, select the ONE statement that is **NOT TRUE** [See Am J Pathol 2010, 178:12-18; DOI: 10.1016/j.ajpath.2010.08.004; the authors of the referenced article did not disclose any relevant financial relationships.]
   a. To be effective, systemically delivered pharmacological compounds must reach high concentrations in the tumor and are therefore frequently toxic to the normal tissue or have limited success in curing the disease.
