Path to Publish - the monthly *AJP* newsletter

Last month Path to Publish announced [The American Journal of Pathology's](#) new timeline for publishing manuscripts online ahead of being typeset or seen by the copyeditors. The new timeline has been implemented, and one of the first articles published posted in this manner has already been noticed and recommended in F1000Prime as an article of special significance in the field of Gastroenterology & Hepatology! The article, by ASIP member Dr. Satdarshan Paul Monga and colleagues, is entitled "[Platelet-Derived Growth Factor Receptor \$\alpha\$ Contributes to Human Hepatic Stellate Cell Proliferation and Migration](#)", and is available now in [Articles in Press](#). The recommendation is also available to read ([click here](#)), however a subscription to F1000Prime is required to access it.

Did you know...

The American Journal of Pathology has a new online tool that can help you see your article's digital impact. [PlumX Metrics](#) collects information across five categories: usage, captures, mentions, social media, and citations. The tool displays a comprehensive overview of all the attention your article has received, with links out to the individual social media posts and news articles. PlumX also provides links out to Scopus and PubMed, where you can easily see the list of the other manuscripts which have included your work in their reference list.

While PlumX notifications to the Journal office or the individual authors are still under development, we are pleased with this new tool, which provides authors a quick snapshot of their article's online coverage. The tool has been implemented across the entire catalog of *AJP* online content, dating back to 1998. Go check your article on *AJP's* homepage to see its PlumX snapshot!
