Path to Publish - the monthly AJP newsletter

The American Journal of Pathology defines authorship as 1) substantial contributions to conception and design, or acquisition of data, or analysis and interpretation of data; 2) drafting the manuscript or revising it critically for important intellectual content; and 3) final approval of the version to be published. Authors listed on the title page of the manuscript should meet all three conditions. Individuals involved with the production of a manuscript that do not meet all three can be recognized for their assistance in the Acknowledgements section at the end of the manuscript.

Did you know...

The American Journal of Pathology has updated their topic categories in conjunction with expanding the scope last month. The old “Biophysical Imaging and Computational Biology” category is being replaced with “Machine Learning, Computational Pathology, and Biophysical Imaging”.

If you missed last month’s scope update announcement, AJP is now considering foundational, disease-related studies that incorporate deep learning and artificial intelligence. The January issue featured a new Editorial from Editor-in-Chief Martha Furie, along with new Associate Editor Stanley Cohen, which contains further information: Artificial Intelligence and Pathobiology Join Forces in The American Journal of Pathology.

Also as a result of this scope expansion, AJP is glad to welcome new members to the Editorial Board: John Tomaszewski (University of Buffalo), Liron Pantanowitz (UPMC Shadyside), Richard Levenson (UC Davis), Joel Saltz (Stony Brook University), Benjamin Mitchell (Villanova University), Thomas Fuchs (Memorial Sloan Kettering) and Lee Cooper (Emory University).
