Path to Publish - the monthly AJP newsletter

As announced last month, The American Journal of Pathology, is still in the process of switching manuscript processing systems from EVISE to Editorial Manager. Office staff continues to work with the migration team to set up and test the new system prior to launch. Stay tuned for the official announcement that the switch has gone live!

Reviews

- **Hepatitis C Virus Infection and Cholangiocarcinoma: An Insight into Epidemiologic Evidences and Hypothetical Mechanisms of Oncogenesis.** This Review article is coauthored by ASIP members Shannon Glaser and Gianfranco Alpini.

- **Plexiform Arteriopathy in Rodent Models of Pulmonary Arterial Hypertension**

- **An Overview of the Derivation and Function of Multinucleated Giant Cells and Their Role in Pathologic Processes**

- **Understanding the Similarities and Differences between Hepatic and Pulmonary Veno-Occlusive Disease**

Did you know...

We are halfway through 2019 and The American Journal of Pathology has already published an equal number of Reviews and Mini-Reviews as we had for the full year in 2018!

All of our Review article content is free for all readers and can easily be accessed on one place online. Check the Collections menu from the AJP homepage to quickly access a list of the Review and Mini-Review articles.

The rest of 2019 will continue to have robust Review article content, thanks to a strong response to Editor in Chief Martha Furiel’s call to the membership back in April. As a reminder, the parameters for a Review or Mini Review can be found online in the Instructions to Authors. Proposals should be sent into the Editorial Office, along with a copy of the lead author’s CV for consideration.

Submit your work to AJP today!

ASIP Member Submissions

- **Polyploid Hepatocytes Facilitate Adaptation and Regeneration to Chronic Liver Injury**

AJP in the News

- **Biomarker may help identify men with prostate cancer at greater risk of tumor metastasis**
Syntaphilin is a Novel Biphasic Biomarker of Aggressive Prostate Cancer and a Metastasis Predictor

This article is also an Editor’s Choice selection for April and is therefore FREE online to all readers!
